

MilkTracker

Impact Outcomes with feeding intelligence that's deeply connected to clinical workflows and family-centered care.

MilkTracker ensures correct feeds by prioritizing safety at every step, engaging families in the feeding journey and connecting them to hospital lactation support through a user-friendly parent app. Our smarter workflows reduce errors, anticipate clinicians' next steps and keep the focus on what matters most: safe, efficient, connected feedings.

Smarter Feeding. Safer Outcomes.

- Unparalleled safety features that provide traceability and transparency for milk and formula preparation and administration.
- Specialized clinical insight that focuses on workflow intelligence.
- Industry-leading barcode scanning and automated documentation improves clinical efficiency.
- Dedicated customer success team and reliable, US-based technical support available 24/7.
- Regular enhancements based on hospital partner's feedback, provided at no additional cost to hospital partners.
- One seamless family experience for all AngelEye solutions.

What do feeding errors cost your NICU?

For Clinical Staff

- Critical layers of protection throughout the milk and formula management process to prevent misadministration of feeds.
- Prepare feeds - containing formula and/or breastmilk - more accurately with built-in recipe calculator.
- Seamless EHR integration (BMDI) with automated data flow and order validation.
- Optimize inventory and minimize waste with supply and expiration insights.
- Adhere to best practices by electronically tracking donor milk and human-milk-derived fortifiers.
- Secure one or two-way multimedia communication tools to effortlessly communicate with parents and connect them with hospital lactation support.

For Parents

- Log and track pumping sessions with real-time review of EBM inventory at home vs. at the hospital.
- Connect with in-hospital lactation support and other clinical resources through multimedia messaging to support breastfeeding goals and seamless communication.
- Free app with translation available into 70+ languages. (powered by HIPAA-compliant Amazon Translate).
- Access to AI-powered chat feature, for application support.
- Print & Pump Station, where parents can independently print labels without assistance from staff.
- Set pumping goal reminders and receive low inventory alerts to help parents stay informed and organized.

Always Innovating

Enhanced Recipe Calculator

Our soon-to-be-released improved recipe calculator effortlessly scales recipes with precision, automating more complex recipes that allow for targeted fortification.

AngelEye solutions support evidence-based practices outlined in the NPA's Best Milk Guidelines
