

Impact

OUTCOMES

with feeding management that's intelligent, intuitive and deeply connected to clinical workflows and family-centered care

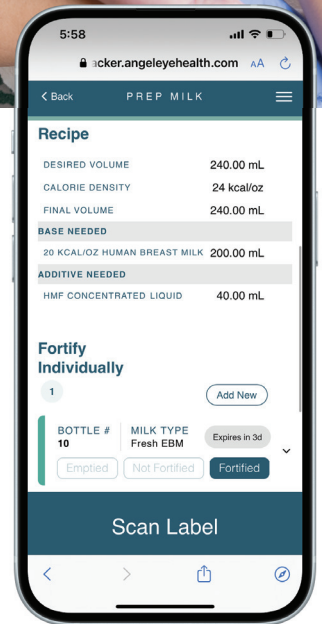

MilkTracker ensures correct feeds for patients by prioritizing safety at every step of the feeding process, involving families in the feeding journey, and providing access to hospital lactation support through a user-friendly parent app.

We're engineering smarter workflows that will reduce errors, anticipate the clinician's next step and allow families and staff to focus on what matters most: **safe, efficient, more connected feeding.**

Smarter Feeding. Safer Outcomes.

- Unparalleled safety features that provide traceability and transparency for milk and formula preparation and administration.
- Specialized clinical insight that focuses on workflow intelligence.
- Industry-leading barcode scanning and automated documentation improves clinical efficiency.
- Dedicated customer success team and reliable, US-based technical support available 24/7.
- Regular enhancements based on hospital partner's feedback, provided at no additional cost to hospital partners.
- One seamless family experience for all AngelEye solutions.

AngelEye solutions support evidence-based practices outlined in the NPA's Best Milk Guidelines

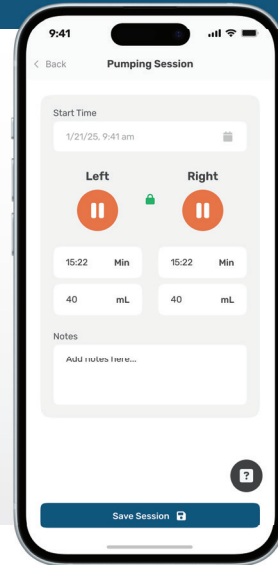

For Nurses & Hospital Staff

- Critical layers of protection throughout the milk and formula management process to prevent misadministration of feeds.
- Prepare feeds - containing formula and/or breastmilk - more accurately with built-in recipe calculator.
- Seamless EHR integration (BMDI) with automated data flow and order validation.
- Optimize inventory and minimize waste with supply and expiration insights.
- Adhere to best practices by electronically tracking donor milk and human-milk-derived fortifiers.
- Effortless communication with parents to provide lactation resources and support.

For Parents

- Log and track pumping sessions with real-time review of EBM inventory at home vs. at the hospital.
- Connect with in-hospital lactation support through 2-way messaging to assist parents in achieving breastfeeding goals.
- Free app with translation available into 70+ languages. (powered by HIPAA-compliant Amazon Translate).
- Access to AI-powered chat feature, for application support.

COMING SOON

New Innovations for Complete Feeding Intelligence

Enhanced Recipe Calculator

Our improved recipe calculator effortlessly scales recipes with precision. MilkTracker will automate more complex recipes that allow for targeted fortification.

Self-Serve Printing for Parents

This feature enables parents to independently print pump/parent labels for their baby without assistance from clinicians or staff, improving staff efficiency and reducing this task from their workload.

Pumping Reminders and Goals

Pumping reminders allow parents to set a "pumping goal" for the number of pump sessions in 24-hours and get automated reminders to help meet their goals.

Low Inventory Alerts

This feature helps families stay informed and organized so they know when milk inventory is running low. Low inventory alerts will allow parents to set a threshold to receive a low inventory notification, which can be adjusted easily as needed.
