

## AngelEye Health Acquires SupportSpot Platform from Child Life On Call to Expand its Family Support Capabilities

**NASHVILLE, TN — March 25, 2026 —** [AngelEye Health](#), a leader in neonatal and pediatric digital solutions, today announced the acquisition of the SupportSpot platform from Child Life On Call (“CLOC”), a digital platform dedicated to child life–informed psychosocial support and procedural preparation resources for pediatric patients and their families. The acquisition of SupportSpot represents the next step for AngelEye’s care continuum strategy, bringing together complementary capabilities and solutions to further support families navigating hospitalization and the transition home with greater confidence.

As an enhancement to its existing solutions, including [MilkTracker](#), [CameraSystem](#), and [NICU2Home](#), the SupportSpot platform extends AngelEye’s long-standing focus on scalable, family-integrated engagement while aligning with clinical workflow realities. Used by parents, nurses, child life specialists, and multidisciplinary teams, SupportSpot expands access to psychosocial care resources by helping families prepare for medical procedures, navigate post-discharge expectations, and access evidence-based coping tools—all without adding to the workload of already-stretched clinical staff.

“This acquisition reflects how we innovate: listening to families and care teams and investing in what they tell us is important,” said Christopher Rand, CEO of AngelEye Health. “Together, AngelEye Health and SupportSpot’s capabilities will extend family engagement beyond inpatient care while fitting seamlessly into clinical workflows and operational realities.”

With this acquisition, AngelEye will expand its digital education offerings across both inpatient and post-discharge support services. During inpatient and outpatient care visits, educational resources and child life–informed tools will strengthen preparation, coping, and caregiver confidence within the realities of bedside and office-based staffing constraints. Following discharge, accessible, just-in-time resources will reinforce education and help families carry out complex care plans throughout recovery and ongoing outpatient needs.

“By integrating our SupportSpot’s child life–informed capabilities, AngelEye is positioning psychosocial education and procedural preparation as a standardized, scalable component of pediatric care, strengthening support for families and clinicians at every transition point,” said Katie Taylor, Founder of Child Life on Call. “We’re excited to partner with AngelEye through this acquisition and see our platform scale to further serve families managing their child’s care and healing.”

### **About AngelEye Health**

Over 350 hospitals chose AngelEye Health to help care teams build an AI-driven path to better clinical and operational outcomes for their neonatal and pediatric patients. With its smart, safety-focused platform, which includes the [CameraSystem](#) (Patient Engagement), [MilkTracker](#) (NICU/Pediatric Feeding Management), [NICU2Home](#) (Patient Education & Discharge Coordination), and AIVision solutions, AngelEye is uniquely positioned as the "digital NICU mind" with patients being the driving motivation. These integrated services deliver measurable improvements in length of stay, staff efficiency, and patient transitions while maintaining secure connections between care teams and families. AngelEye Health is the only comprehensive technology platform that integrates with your EHR, connecting caregivers and families with video data, clinical analysis, navigation, discharge management, and feeding documentation to ensure a smooth transition to health for pediatric patients.
