CameraSystem
Live-Stream Video

Improve
NICU OUTCOMES

By encouraging and supporting parent and family bonding with their infant.

As we continue to innovate and add new capabilities, the bedside camera can be automatically updated with additional functionality without having to replace the camera.

That means you benefit from our commitment to listening and continually improving our technology without the hassle and expense of downtime associated with swapping hardware.

5-inch LED Touch Screen to assist with camera positioning and on/off capability

Infrared Capabilities for a clear visual of baby, even in the darkest environments

Flexible mounting options for any unit configuration

Upgrade-ready for remote software updates

Wired or WIFI Networking Capability to meet your facility preferences

USB Ports for future functionality, such as one-way audio and extension cameras

AngelEye's HIPAA-compliant platform includes four independent solutions.

CameraSystem

Live-streaming access anytime, anywhere encourages family bonding and decreases anxiety.

- 24/7, live-streaming video
- In-app translator
- Real-time family chat

OnlineEducation

On-demand resources empower families with information to ensure a successful transition home.

- Customizable
- Use the free app or access online
- Accessible post discharge

PatientConnect

Integrate parents as integral members of the care team with real-time and recorded updates.

- Share vital information and memorable moments
- One-way video, picture/text

MilkTracker

Comprehensive feeding management solution that encourages parents' participation in their infant's feeding plan.

- Leading barcoding technology
- Clinician-supported best practice
- Seamlessly EHR integration

---

100+ Hospitals

Average parent logs in 5+ times per day

Parents average 3.5 minutes per visit

The AngelEye Value Proposition

- **Supports family-integrated care** by empowering, educating, and engaging families in the care of their child
- **Builds trust between clinician and family** with personalized communication
- **Improves family satisfaction** by recognizing parents as integral members of the care team
- **Encourages family participation** in infant/baby's feeding plan

- **Saves time** by reducing time spent educating families at the bedside
- **Improves provider efficiency** by enabling quick, individualized updates from any mobile device, tablet, or computer
- **Improves clinician efficiency** minimizing disruptions in workflow by decreasing calls from families
- **Aims to eliminate risk** of feeding and preparation errors

Quadruple Aim

- Enhancing Patient Experiences
- Reducing Costs
- Improving Population Health
- Improving Provider Work Life

- **Decreases length of stay** by supporting discharge readiness
- **Reduces donor milk cost** by supporting Moms Own Milk (MOM) production
- **Decreases readmissions** by increasing family engagement and discharge education access
- **Reduces expense** related to staff time, quality oversight, & error/risk litigation

- **Encourages bonding and decreases anxiety** with live-streaming video of baby and frequent updates
- **Supports breast milk establishment and production** with easy access to view baby
- **Supports ongoing family educational needs** by providing resources post-discharge
