

Improve

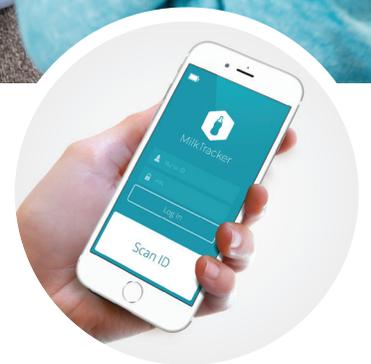

PATIENT OUTCOMES

By providing the safest most cost-effective end-to-end Feeding Management Solution

With MilkTracker, “milk management” goes beyond simply verifying the right feed matches the right patient. Our solution enhances safety throughout the entire feeding process, engages families, supports lactation, and helps to reduce errors and save money through its parent-facing App.

MilkTracker makes the feeding process safer for patients, more efficient for staff, and more engaging for families.

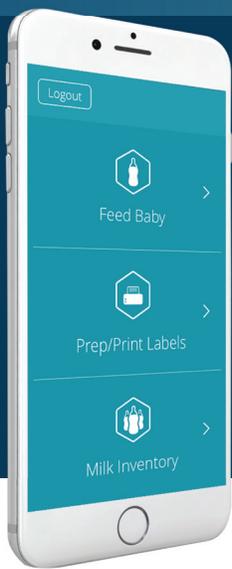

The MilkTracker Difference

- Expert clinician on-site to assess current workflows and perform gap analysis
- Clinical collaboration creating customized application workflows to meet the facility's needs
- Reliable, on-going 24/7 tech support
- Breast milk preparation and feeding error reduction
- Clinicians save significant time typically spent on inventory, preparation, and administration
- Robust and customizable tracking, auditing, and user trends

Care Team App

- Seamlessly integrates into any EHR (BMDI)
- Automated data entry of feeding and fortification statistics, lot numbers, and more
- Assign and track parent education and resources

Parent-Facing App

- **Reports and Analytics** – Parents and staff can easily track milk supply trends and inventory levels.
- **Milk Messages** – Two-way communication between lactation staff and parents.
- **OnlineEducation™** – Empowers and informs families with customized, mobile education supporting breast milk production and breastfeeding, accessible up to 90 days post-stay.
- **PatientConnect™** – Enable clinicians to share important information and support their feeding journey with secure, one-way text (in over 100 languages), photo, and video communication anywhere, any time.

MilkTracker Meets the Quadruple Aim

Enhancing Patient Experiences

- Encourages family participation in baby's feeding plan
- Supportive communication between lactation staff and families, including inventory notifications

Reducing Costs

- Lowers expenses on staff time, quality oversight, & error/risk litigation
- Reduces donor milk cost by supporting mother's own milk production

Improving Provider Worklife

- Streamlines workflows through bar code scanning and easy-to-read labels
- Enables efficient communication between providers and patients

Improving Population Health

- Aims to eliminate feeding & preparation errors
- Supports more infants receiving the benefits of mother's own milk
